

# prep week

## technical english – group project

---

The following exercise contains the following subjects:

- technical english text comprehension.
- team work
- git + github

## Instructions

1. this task will be a group effort to create a presentation on a technical topic you are not familiar with.
2. You will research the topic, summarize the main points in a file, a file with all the resources you used (links, videos, articles etc) create a presentation and a file with all your group names. All these files should be in a group folder inside the repo.
3. Each student should have his/her own folder in the repo. Inside it – a text file containing all that you learned about the topic.
4. All of the files should be uploaded to a repo in github, and everyone will work using the git workflow – clone, commit, pull, push, branches, pull requests etc.
5. one of the group will be the repo maintainer: open a repo, add others as collaborators, approves Prs.
6. One of the group will be the presenter – who will show the rest of the class the presentation. The rest of the class should feel by the end that the presentation was clear and understandable.

7. Assume your audience doesn't have a technical background!
8. Include storytelling, visual aids, animations or any other tool.
9. The presentation should be 10 minutes long.
10. The topics are: **vector db, server side rendering, progressive web apps, web accessibility (WCAG)**
